P/N Style
08-55-1 Black
08-55-2 Raw

Due to varying thread timing positions when parts are manufactured, (Joker Machine's and H/D's), some adjustments might be necessary during installaion.

Adjust the 5/16"-24 set screw to acheive the correct position of the shift peg when tightened.

Use of thin washer in area shown may be necessary to obtain the correct position when fully tightened.

Use BLUE LOCTITE on all threaded surfaces.
