WELCOME TO THE NEXT LEVEL

## WHAT'S NEW

- » New for 2017 is the category exclusive Havok EMC, E-Mountain Casing. Designed specifically for the added stresses that the weight and force of e-bike motors have on tires. Built to be strong, fast, and offer plenty of grip.

## Welcome to the next level

The Havok's plus sized combination of larger air volume, increased contact patch and the versatile open tread pattern yields aggressive performance and ride quality.

## Rider profile

Grip, grip, grip - you can't get enough of it, and the thought of running your tire at an extremely low pressure for even MORE grip gets you excited. No way around the Havok!

## HIGHLIGHTS

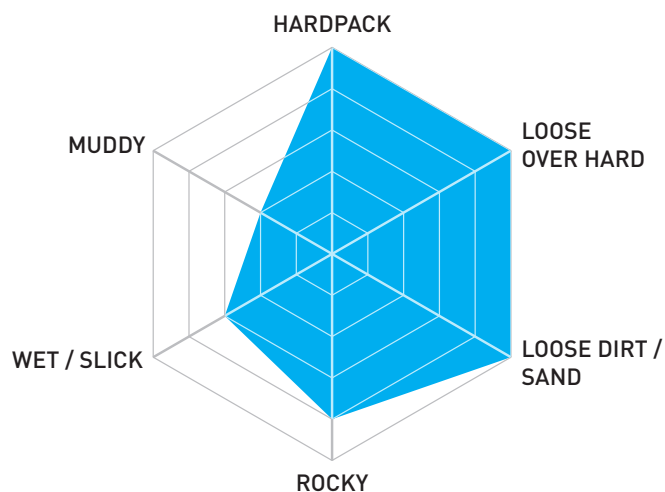

- » **Fast rolling** - Don't be fooled by the plus size. Low profile center blocks allow for quick rolling.
- » **Cornering grip** - Siped transition knobs and shoulder blocks bite into hard and loose terrain.

- » **E-bike ready** - Certified to the ECE-R75 standards, making the Havok suitable for e-bikes up to 50km/h in speed.
- » **Tubeless ready** - Saves weight and provides a better rolling performance. Riding tubeless also means riding flat free.

**GUIDO TSCHUGG**  
E-MTB LEGEND

*The new EMC casing is a real innovation for e-bike trail riding. With the weight of an e-bike pushing down, 650B+ tires often feel spongy, but the Havok is always stable and keeps you right on track. And with the 650B+ size, you can run it at really low pressure, which means you will have a ton of grip as the tire adapts to the ground.*
