BAR END IS SLOTTED FOR  
THROTTLE BY WIRE OPTION

## ERGO BARS

### FOR A MORE RELAXED AND COMFORTABLE WRIST POSITION.

Ergonomically correct wrist position not only reduces stress to your wrists, but may help reduce that pinched feeling between your shoulder blades after a day of riding! Klock Werks ERGO Bars are offered in three different styles to cover a large range of riders and preferred riding positions. ERGO bar options are designed specifically to adjust your wrist to a more natural relaxed position, vs. riding with stock bars. ERGO bars accept stock controls/housings, and are predrilled and slotted for internal wiring. They are designed to work with stock length cables, wires and heated grips.\*

\*NOTE: For easier installation of 2014+ Ergo Bars, Klock Werks recommends a wire extension kit. Drag Specialties Part #: 2120-0368.

### THE DIFFERENCE IN WRIST POSITION

Ergo Bars have been designed specifically to have a more relaxed, comfortable wrist position.

BACK BARS

STANDARD BARS

UP BARS

STOCK

### THE DIFFERENCES IN HEIGHTS

Various heights have been designed to fit every riding style.

STOCK BARS

STANDARD BARS

This style is close to stock bar height with a more relaxed wrist position and sportier stance.

BACK BARS

A relaxed cruiser model, perfect for the shorter rider or even for a taller rider wanting to kick back. They allow for a more relaxed seating position.

UP BARS

Designed for the taller torso rider or someone who prefers a taller bar. Hand position is higher and closer to fairing, with your arms almost level rather than reaching down.
