\*With a 20" wheel, minimum tire width is 2"

# SwingOut

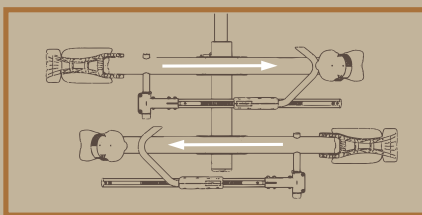

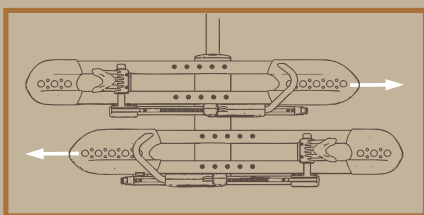

The BackStage is the only swing away platform hitch rack on the market that is integrated and swings out a full 180 degrees.

# Coatings

All RockyMounts Hitch Racks utilize a dual coating system on Steel components. This is comprised of an ED (Electro-Deposition) inner coating and an outer powder coating rated for 5 years. This adds an addition layer of weather protection both inside and out.

# Sliding Trays

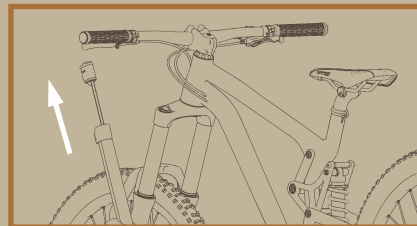

# Security

We Include locks with most of our hitch rack lineup.

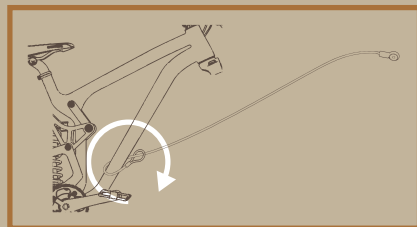

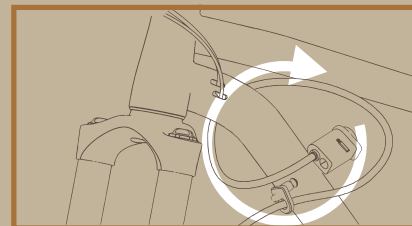

The SplitRail LS has integrated and hidden cable locks in the load arms of the rack, which allow each bike to be locked individually.

The BackStage and MonoRail Family use an external cable that can be lassoed through the bike frames and around the the outermost bike then locked directly to the rack.

The WestSlope family utilizes a cable kit that can be purchased separately, using the same cable system as the BackStage and MonoRail.

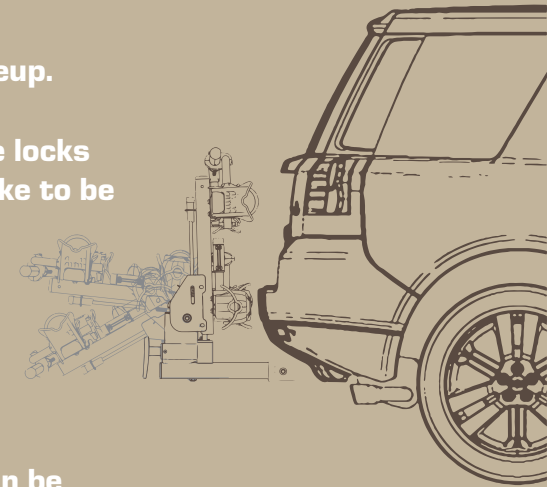

SplitRail Integrated Locks

BackStage, MonoRail, and WestSlope Lock Kit

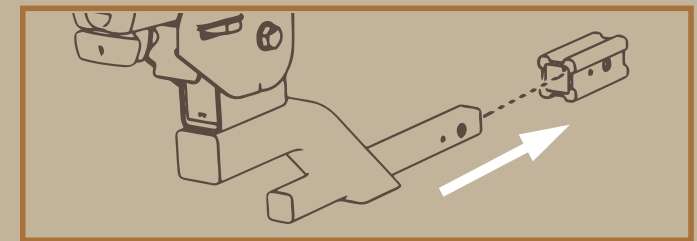

# Pivot Positions

Our hitch racks have three main pivot positions. Stowed (Vertical), Use (carrying bikes), and an open position which allows the racks to pivot an additional 30 degrees to allow access to the rear of the vehicle.

# Adaptability

The MonoRail Solo and WestSlope 2 Bike Rack are able to be used on both 1.25" and 2" hitch receivers with the included adapter.

The SplitRail, BackStage, and MonoRail Family are capable of sliding the trays left or right in order to avoid handlebar to saddle interference.
